```java
public class TesteSobrecargaSoma{
    public static void main(String[] args){
        Calculadora c = new Calculadora();

        float f1 = 56.7f;
        float f2 = 0.3f;

        System.out.println(c.soma(f1, f2));

        String s1 = "50";
        String s2 = "60";

        System.out.println(c.soma(s1, s2));

        int x = 1;
        int y = 2;
        int z = 3;

        System.out.println(c.soma(x, y, z));

        System.out.println(c.soma(s1, x));

        System.out.println(c.soma(x, s1));

    }
}
```
